1 Introduction

Department of Veterans Affairs (VA) Veterans Health Information Systems and Technology Architecture (VistA) Scheduling Graphical User Interface (VS GUI) module is the Windows GUI version of the Patient Information Management System (PIMS) Scheduling module. It provides appointment management functions included in PIMS Scheduling, but with the added convenience and usability of a GUI.

1.1 Purpose

The Veterans Health Administration (VHA) Office of Integrated Veteran Care (IVC) requested an enterprise enhancement for the VS package that supports COVID-19 response. The enhancement reduces operating costs for VHA and improves operational efficiencies, resulting in patient-centered access to care, coordinated care, increased customer satisfaction, and the reduction of excessive cycle/wait time for scheduling patients.

1.2 Overview

VS GUI is a software module that allows schedulers to make appointments quickly by viewing multiple appointment request types and multiple clinics in one screen. A scheduler can easily view patient requests for service, find the next available open appointment, view the provider's availability in multiple clinics, and track a patient's appointment process. Refer to [System Summary](#) for a more detailed description of VS GUI functionality.

1.3 Disclaimers

1.3.1 Software Disclaimers

This software was developed at the Department of Veterans Affairs (VA) by employees of the Federal Government in the course of their official duties. Pursuant to title 17 Section 105 of the United States Code this software is not subject to copyright protection and is in the public domain. VA assumes no responsibility whatsoever for its use by other parties, and makes no guarantees, expressed or implied, about its quality, reliability, or any other characteristic. We would appreciate acknowledgement if the software is used. This software can be redistributed and/or modified freely if any derivative works bear some notice that they are derived from it, and any modified versions bear some notice that they have been modified.

1.3.2 Documentation Disclaimers

The appearance of external hyperlink references in this manual does not constitute endorsement by the Department of Veterans Affairs (VA) of this Web site or the information, products, or services contained therein. The VA does not exercise any editorial control over the information you may find at these locations. Such links are provided and are consistent with the stated purpose of the VA.

1.4 Project References

1.4.1 Information

The VS GUI points of contact (POCs) include:

- » IVC Program Office – Redacted
- » TeleHealth & Scheduling Technical Director – Redacted
- » IVC Emerging Technologies Acting Legacy Program Manager – Redacted

VSE Resources

- » Veterans Health Administration (VHA) VSE SharePoint: Redacted
- » VA Software Document Library (VDL) – Scheduling (VSE manuals near the bottom): Redacted
- » National Return to Clinic (RTC) Order: Redacted

2 System Summary

The VSE project delivers a series of enhancements to legacy VistA Scheduling Version 5.3 via the VistA Scheduling (VS) Graphical User Interface (GUI) application.

This update is for the nationally released version 1.7.33.1, which includes VS GUI 1.7.33.1 and VistA patch SD*5.3*827. At time of publishing, install period is projected for December 2022.

VS GUI Release 1.7.33.1 contains user facing changes as well as several back-end fixes. Major enhancements include updated navigation within the RM grid to meet 508 requirements, a splash screen notification to advise users of changes in application behavior, and the filtering of users expired, non-authentication PIV certificates. Additionally, Gender Identity has been updated to Birth Sex in the Patient Info screen and a few minor issues surrounding service/specialty requests have been fixed. The back-end changes include Remote Procedure Call (RPC) updates as well as several new RPCs created to support future functionality.

3 Key Feature Update in Version 1.7.33.1

3.1 Updates RM Grid Navigation

As of this release, users navigating through the RM grid will be able to single click a request and arrow through the requests without the calendar beginning to load. The calendar will now load on a double-click of a request or by hitting enter on a request in context to meet 508 requirements.

3.2 Created Notification to Advise Users of Changes in Application Behavior

A notification has been created to advise users of the change in behavior in the RM grid. The pop-up will appear after the user logs in and will continue to pop-up after login until the user selects the Hide Notification check box.

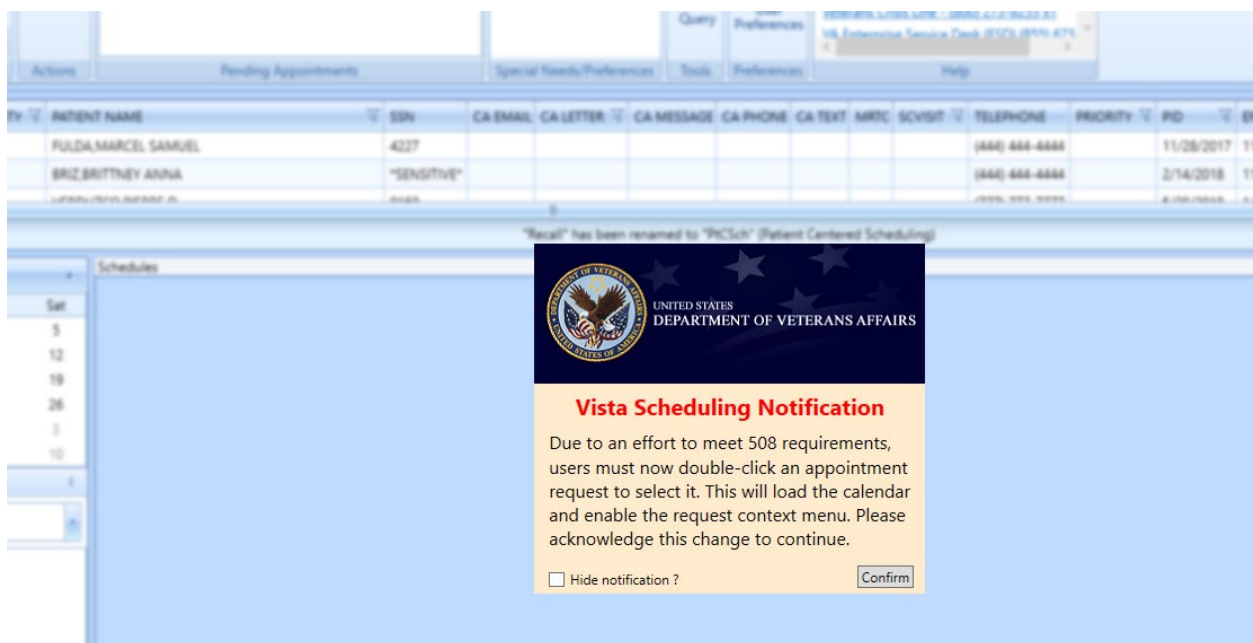

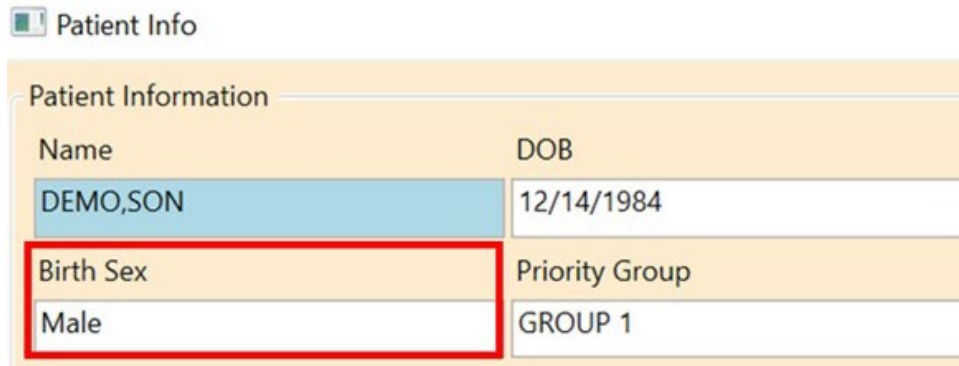

Figure 1: Image of displayed pop-up box to advise users of changes in application behavior.

3.3 Filters out expired, non-authentication PIV certificates

As of this release, VS GUI will filter out expired, non-authentication PIV certificates to minimize the number of certificates the user must scroll through to select the correct one.

3.4 Displays Birth Sex in Patient Info

As of this release, the Patient Info screen has been updated to show Birth Sex.

The image shows a 'Patient Info' form. The 'Birth Sex' field is highlighted with a red rectangular box. The form contains the following data:

Patient Information	
Name	DOB
DEMO,SON	12/14/1984
Birth Sex	Priority Group
Male	GROUP 1

Figure 2: Image displaying Birth Sex Box.

3.5 Context Menu Disabled in RM Grid

The user must double-click a row in the RM Grid to enable access to the right click context menu.

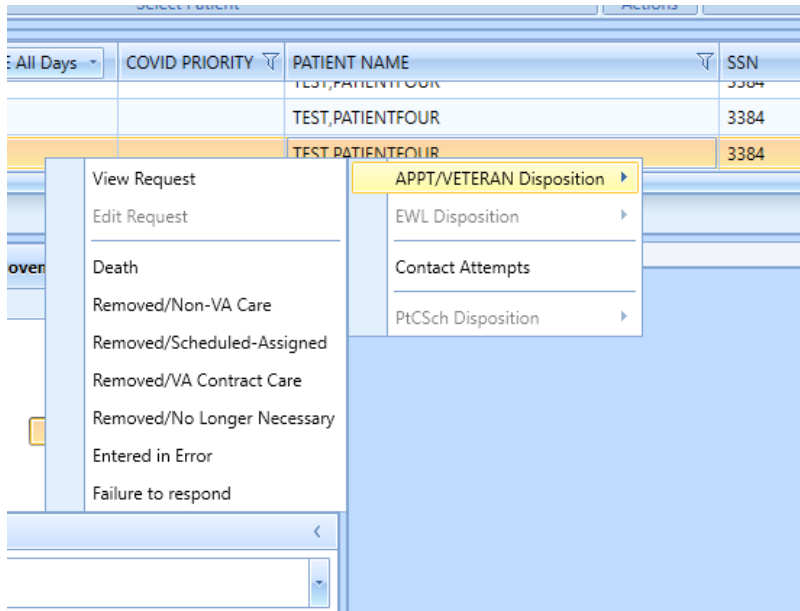

Figure 3: Image displaying Context Menu Disabled in RM Grid.

The start times of all clinics within a clinic group now show in the calendar as expected.
